EDUCATION

University of Information Technology (UIT)

Computer Science (GPA: 84.97/100)

IELTS Academic

6.0 Overall

Ho Chi Minh City, VietNam

2023 - Now

Issued Feb 2023 - Expires Feb 2025

TECHNICAL SKILLS

Data Engineering and Cloud: SQL, Python, Apache Spark, Airflow, Kafka, dbt, Microsoft Fabric, Azure Services, GCP Services, BigQuery

Backend and Tools: JavaScript, TypeScript, Next.js, Node.js, NestJS, Docker, Selenium, Beautiful Soup, PostgreSQL, MongoDB

WORK EXPERIENCE

Data Engineer Intern

Norrin, VietNam

April/2026 - June/2026

- Learned and applied Microsoft Azure and Microsoft Fabric services for cloud data engineering, and successfully passed the Microsoft AZ-900 and DP-700 certifications.
- Collaborated with one teammate to build an end-to-end Medallion pipeline in Microsoft Fabric, covering data ingestion, Bronze-Silver-Gold data transformation, and curated datasets for analytics.
- Developed an integration flow that triggered data processing from SharePoint events and returned processed data through an API endpoint when requested by users.

Data Engineer Intern

WATA Software, VietNam

December/2025 - March/2026

- Designed a GCP data platform using Medallion Architecture, with three ingestion pipelines: full batch load and CDC from PostgreSQL (47 tables), and manual CSV/Excel uploads, landing raw data in GCS (Bronze layer).
- Built Spark ETL jobs on Dataproc to clean, join, and transform raw data, then loaded curated datasets into BigQuery.
- Orchestrated batch and incremental workflows using Cloud Composer (Airflow) and implemented dbt models (staging, fact, dimension) with data validation tests.

Software Engineer intern

Lumination, VietNam

March/2025 - June/2025

- Built a full-stack internal tool using NestJS and Next.js to automate file renaming, organization, and bulk editing for legal, secretarial, and accounting teams.
- Developed a data crawling pipeline using Selenium, Beautiful Soup, AWS EC2, and PM2, producing up to 2GB of structured JSON data from dynamic websites.
- In collaboration with a senior front-end developer and the design team, I developed APIs for a homework management application using NestJS and MongoDB. The application supported key features, including teacher assignment creation, student management, and interactive assignment functionalities for students,.

PROJECTS

E-commerce Analytics and Recommendation Lakehouse

[GitHub](#)

- * Designed a unified Lakehouse architecture for e-commerce analytics and recommendations, using Medallion Architecture to organize raw data, cleaned data, and analytics-ready datasets across Bronze, Silver, and Gold layers.
- * Built batch and streaming data pipelines using Apache Spark for data transformation, Kafka for real-time event ingestion, Airflow for workflow orchestration, and MinIO with Apache Iceberg and Nessie for Lakehouse storage and table version management.
- * Used Dremio to query Gold-layer datasets and support dashboard analytics, while Spark MLlib ALS was used to train recommendation models and re-rank product recommendations from streaming user behavior events.

CERTIFICATIONS

- [Microsoft Certified: Azure Fundamentals \(AZ-900\)](#)
- [Microsoft Certified: Fabric Data Engineer Associate \(DP-700\)](#)
